PROFESSIONAL SUMMARY

Full Stack Developer with expertise in building scalable web applications and real-time distributed systems. Combines strong problem-solving skillsevidenced by 450+ algorithmic problems solved and a peak rating of 1800 on LeetCode.

EDUCATION

Indian Institute of Information Technology, Sri City 2023–2027
B.Tech in Electronics and Communication Engineering (ECE); CGPA: 8.5 Sri City, AP

EXPERIENCE

Onlearn.app Jan 2026 – Present Remote
Software Developer Intern
Built and maintained core features for a full-stack LMS; contributed to measurable growth in daily active users.
Identified and rewrote slow database queries and REST APIs, noticeably reducing page load times across the platform.
Set up a real-time WebSocket notification system that improved daily engagement by around 15%.
Qbtrix Innovations Jul 2024 – Aug 2024 Remote
SDE Intern
Developed Interacly, a platform that uses LLMs to handle and automate customer support workflows.
Refactored the Node.js backend for better resource utilisation, bringing monthly server costs down by ~30%.
Added Redis caching to high-traffic endpoints, shaving 200ms+ off data load times for common requests.

PROJECTS

Cowscue Feb 2026 Live Demo
Next.js, TypeScript, MongoDB, Gemini AI, Twilio, OSRM
A real-time animal rescue platform connecting citizens with NGOs — uses Pusher for live WebSocket updates and Clerk for role-based access control.
Built an AI triage system with Gemini 2.5 Flash that filters spam reports, estimates injury severity, and responds in multiple regional languages.
Implemented heatmap analytics and batch route optimisation via OSRM to surface accident hotspots and suggest fuel-efficient rescue paths.
Integrated Twilio to push WhatsApp dispatch alerts with Google Maps coordinates to NGO rescue drivers.
Mailflow Jan 2026 Live Demo
Node.js, TypeScript, Redis
Built a bulk email dispatch tool backed by Redis (BullMQ) queues, so high-volume sends don't block the server.
Resolved cloud connection timeouts by configuring SMTP pooling and automatic retries, consistently hitting a 99.9% delivery rate.
Added pixel-based open-rate tracking to give campaigns measurable reach data.
NexusV2X May 2026 GitHub
FastAPI, Kafka, Redis, Next.js, Deck.gl, WebSockets, Docker
Engineered an end-to-end V2X telemetry pipeline, utilizing Apache Kafka to ingest and process high-frequency geospatial traffic simulations.
Implemented a Python backend featuring 2D Kalman Filters to mathematically smooth GPS noise, writing real-time state vectors to a Redis geospatial database for sub-millisecond data retrieval.
Developed an O(log N) proximity radar using Redis Geohashing to detect and broadcast real-time vehicle collisions.
Built a hardware-accelerated Next.js client with Deck.gl to render live traffic WebGL heatmaps at 60 FPS, containerizing the entire microservice architecture via Docker Compose.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, C++, SQL, Kotlin, MATLAB
Frameworks: Next.js, React.js, Node.js, Express, Shadcn, FastAPI, Flask, Zustand, Redux
Cloud & DB: AWS, GCP, Docker, PostgreSQL, MongoDB, Redis, Supabase
Engineering: Microservices, Queue Management (BullMQ), RAG Pipelines, Zero-Knowledge Architecture
Tools: Git/GitHub, Postman, Playwright, Vercel, Render, Figma

ACHIEVEMENTS AND POSITION OF RESPONSIBILITIES

Reliance Foundation UG Scholar — selected from 58,000+ applicants across India. 2023
Placement Coordinator, Training & Placement Cell, IIIT Sri City. Present
Lead Coordinator, Web3SSH '25 — national-level bootcamp & hackathon. Apr–Aug 2025
Sponsorship Lead, Abhisarga Annual Fest. Dec 2025
